Milano 22 December 2011

I herewith would like to express my explicit support regarding the maintenance of the Atlas of Genetics and Cytogenetics in Oncology and Haematology edited with great competence and dedication by Professor Jean-Loup Huret, Poitiers University .

It's my personal feeling and general opinion in the scientific community that this in progress database provides the scientific community and the professional cytogeneticists, oncologists and hematologists with an incredible body of targeted and update information hard to access in the widespread literature.

The classification of the Atlas into entities by theme, the inclusion of deep insights, teaching items and much more make the Atlas a valuable and flexible interdisciplinary resource. For this and many other reasons I am convinced that it would be dysfunctional that this initiative might stall or decline because of lack of economic support.

Sincerely

Lidia Larizza, MD

Professor of Medical Genetics, University of Milan

Past President of ECA (European Cytogeneticists Association) and ECA honorary member

Past President of SIGU (Società Italiana di Genetica Umana)
